Landscape Design

Become an Industry Professional

Internships

FFA Competition Excellence

The South Dade Senior High Agriscience and Horticultural Operations department is a direct reflection of our agricultural community. With concentration in plant science and horticultural production techniques students are able to explore a 2.5 billion dollar industry in Miami-Dade County that has huge economic impact. Students learn "from the ground, up" in our 10 acre land lab that includes a landscape nursery and vegetable row crop field. In this land lab students will produce their own agricultural products that they can sell and make profit on. Students completing the magnet are also eligible to sit for the FNGLA Certified Horticulture Professional test that allows them to become industry certified in one of Florida's largest industries while also giving them college credit. The SDHS program is not only about production and plants. Newly added this year, SDHS has also become one of 11 schools in the state to become an Unmanned Aircraft Systems (UAS), or "drones", training site. Students will learn the agricultural applications of UAS and receive industry certification for UAS safety and flight training when exiting our program. Agriculture has a job for everyone whether indoors or outdoors so come explore your next career!
